

POSTER SESSION

| Poster submitted by: | Title | ID |
|----------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------|----|
| Boels Lonneke | Students' strategies solving problems about statistical graphs | 13 |
| Brzoza Bartosz | Eye-tracking and reaction time data: how do different measures converge to show L2 phonetic learning effects? | 17 |
| Burkhart Christian | How do students use automated concept-map feedback for revising their texts? A cognitive process analysis. | 20 |
| Chauliac Margot | The Role of Students' Interest when Processing a Refutation Text | 15 |
| de Mooij Susanne | Tailoring the individual learning experience using online educational games | 26 |
| Demareva Valeriia | Length, frequency, and predictability effects of words on eye movements in Russian reading | 16 |
| Emhardt Selina | Investigating expertise related gaze during code debugging and experts' didactical gaze | 27 |
| Eteläpelto Anneli | Using self-reports, behavioural registration, and physiological indicators as complementary information for researching emotions in learning | 32 |
| Heirweg Sofie | Profiling upper primary school students' self-regulated learning via triangulating data from self-report questionnaires and think-aloud protocol analysis | 9 |
| Jossberger Helen | | 7 |

| | Systematic Viewing and Diagnostic Performance | |
|-------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----|
| Kamińska Joanna | Relationship between eye tracking parameters and temperament | 35 |
| Kilijańska Barbara | Visibility of different formats of advertisement in newspapers | 6 |
| Knoop-van Carolien A.N. | Processing Multimedia Information: An Eye-Tracking Study on the Redundancy Effect | 10 |
| Kok Ellen | Gaze display interpretation: Can a teacher read a learner's mind? | 29 |
| Leber Jasmin | What does expert and novice teachers' gaze reveal about their classroom management competence? | 30 |
| Makransky Guido | Mechanisms Underlying the Spatial Contiguity Effect in Multimedia Learning | 11 |
| Meier Antje | Photography and mobile gaze-tracking – Exploration of student's perception of mathematics in out-of-school-experiences | 14 |
| Merchie Emmelien | Tracing spontaneous spatial text-learning strategies in late elementary education: comparing digital writing pen data and trace data and eye tracking data | 19 |
| Mercier Julien | Learning to play a new videogame: The nature and timing of online psychophysiological objective experience, and its relationship with self-reported subjective experience after 90 minutes of gameplay | 24 |
| Mercier Julien | The relationship between cognitive engagement and cognitive load in learning to play a new videogame | 25 |

| | | |
|---------------------|--------------------------------------------------------------------------------------------------------------------------------------|----|
| | | |
| Minarikova Eva | Monitoring pair work activities in English language teaching video sequences: What do student teachers pay attention to? | 31 |
| Niemann Moritz | Beyond Self-Report Data: Triangulation of Sensor Measures for Predicting Motivation and Emotion during the Learning Process | 34 |
| Przeździecka Joanna | Influence of forced head rotation on saccades and drift | 3 |
| Rets Irina | Effect of typographic simplification on reading behaviour of English language learners as evidenced by eye-tracking | 18 |
| Richter Juliane | Signaling text-graph combinations: Shedding light on the expertise reversal effect by means of eye tracking? | 12 |
| Salmerón Ladislao | Effect of instructions on students' online and offline sourcing while reading a controversial topic on the Internet | 21 |
| Smolderen Hans | Grasping the link between online and offline learning behaviour | 22 |
| Stein Isabell | Visualising Gaze Data on a Virtual 3D Model | 1 |
| Szmigiel Marta | Analysis of the parameter of eye movements and pupil geometry | 2 |
| Szymańska Monika | Oxytocin increase comfort seeking in insecure adolescents: An exploratory eye-tracking and neurophysiological study | 33 |

| | | |
|----------------|-------------------------------------------------------------------------------------------------------|----|
| | | |
| Tobinski David | Starting the Investigation of the Planning Load: Planning Performance and Eye Movement Behavior | 5 |
| Tsai Men-Jung | Visual pattern, information search anxiety and performance in online inquiry learning | 23 |
| Wortha Franz | Predicting conceptual understanding in art learning from eye-movements and metacognitive judgments | 8 |
| Wyss Corinne | What's going on? – Eye tracking as a tool to study student teacher's professional vision | 28 |
| Zäber Anna | How eyes work in case of fatigue? Measurement of the fixational eye movements | 4 |
